Workshop on Adaptive Management and Impact Assessment - January 12, 2011

*The **International Association for Impact Assessment** (IAIA) is the world's leading professional association in the field of impact assessment.*

*The **Western and Northern Canada Affiliate** includes members from the federal and territorial government, consultancies, co-management boards, industry and NGOs. Its goal is to promote and develop best practice in environmental impact assessment.*

*The **British Columbia Chapter** works to bring news, information, events, professional development and networking opportunities to BC practitioners and students.*

The Vancouver Chapter of the International Association for Impact Assessment's Western and Northern Canada Affiliate (IAIA WNC) is hosting an exciting one-day workshop on adaptive management and impact assessment.

Adaptive management is a hot topic among impact assessment practitioners. When it is used appropriately, this tool has enormous potential to help manage project impacts and cumulative effects.

This workshop will include training by Carol Murray of ESSA Technologies on the basics of adaptive management:

- What adaptive management is, and how it differs from other similar approaches
- How to do adaptive management – key steps and elements
- When adaptive management is most useful, and when it may not be necessary or appropriate

The workshop will also explore:

- Canadian Environmental Assessment Agency policy on adaptive management
- Case study of adaptive management in environmental assessment
- Applying adaptive management to impact assessment (group discussion)

Please join us to network with fellow practitioners and explore this exciting topic!

When: January 12, 2011, 9:00AM – 5:00PM

Where: SFU Downtown campus, Rooms 1400-1410,
515 West Hastings Street, Vancouver BC

Registration: $125

Register at **https://event-wizard.com/events/iaiaworkshopam/**
